New nucleic acid encoding specific protein tyrosine phosphatases - useful for identifying specific modulators for treatment and prevention of cancer and neurodegenerative disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The present sequence represents mouse PTP05. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify
                                                                                                                                                                                                                   PTP04; FTP05; PTP10; SAD; ALP; ALK-7; protein tyrosine phosphatase; type I receptor serine/threonine kinase; cancer; leukaemia; lymphoma; neurodegenerative disease; neuronal survival; Alzheimer's disease; Parkinson's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Markby
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Onrust 5,

```
substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor particularly for treating Alzhedimer's, Parkinson's or Huntington's particularly for treating Alzhedimer's, Parkinson's or Huntington's proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA, to generate transgenic animals and in generate appropriationally after mutation). Ab are used to determine the

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTPD5, PTP10, ALP and ALK-7 proteins. The present sequence represents mouse PTP05. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTP8) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and proteins, particularly cancer (e.g. leukaemia and serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polymucleotides encoding the proteins can be used as probes to identify and clone related sequences; to defect protein-encoded RNA; to generate transgenic animals and in gene the property of the public acid fragmention). Ab are used to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SPSDKYRLUVPEPLESDTDETVWDVSDRSLRNRWNSMDSETAGPSKTVSPVLSGSSRLSK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The presents equence represents mouse PTP05. The above proteins, other than pLK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzhaimer's, Parkinson's or Hunington's diseases. Nucleic acid fragments of the polymucleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful

                                                                                                                                                                                                                                                                                                                                                                         AAW89264
```

cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polymucleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the proteins. The present sequence represents a human PTPOS peptide from the present invention

substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzhaimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polymucleoties encoding the proteins can be used as probes to identify and clone related and in gene therapy (optionally after mutation). Ab are used to determine the proteins. The present sequence represents a human PTP05 peptide from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTP04; PTP05; PTP10; SAD; ALP; ALK-7; protein tyrosine phosphatase; type I receptor serine/threomine kinase; cancer; leukaemia; lymphoma; neurodegenerative disease; neuronal survival; Alzheimer's disease; Parkinson's disease;

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The above proteins, other than ALK-7, are protein tyrosine phosphates. The above proteins, other than ALK-7, are protein tyrosine phosphates the acivity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphomal), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly

```
survival, particularly for treating Alzheimer's, Parkinson's or function's diseases. Nucleic acid fragments of the polyuacleorides encoding the proteins can be used as probes to identify and clone related sequences, to detect protein-encoded RNA, to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the proteins. The present sequence represents a human PTPOS peptide from the present invention

당 New nucleic acid encoding specific protein tyrosine phosphatases for identifying specific modulators for treatment and prevention cancer and neurodegenerative disease.

Claim 2; Page 160; 193pp; English.

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALD and ALK-7 proteins. The present sequence represents rat PTP10. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and ansagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leuksemia and lymphoma), while modulators of ALK-1 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival,

Claim 1; Page 242; 282pp; English

The invention relates to an isolated polypeptide, which is a human kinase and phosphatase (KPP). KPP agonists and antagonists are useful for

φ

diagnosing, treating or preventing disorders associated with aberrant expression of RPP, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaenia or cancer), developmental disorders (e.g. renal tubular acidosis, anaemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), autoimmune/inflammatory disorders (e.g. AIDS; acquired immune deficiency syndrome, allergies, asthma, autoimmune thyroiditis, contact dermattisis, Crohn's disease, diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, qout, Grave's disease, Hashimoto's thyroiditis, irritable bowel syndrome, multiple scherosis, osteoarchritis, osteoarchritis, osteoarchritis, osteoarchritis, osteoarchritis, osteoarchritis, vorse of exceptonosis, pancreatiis, Reler's syndrome, uveitis), osteoarchritis, Syogren's syndrome, uveitis), or viral, bacterial, fungal, parasitic, protozoan or helminthic infections. The KPP is useful in assessing the effects of exceptones compounds on the expression of nucleic acids and kinases and phosphatases. KPP gene is useful in gene therapy and for creating transgenic animals to model human disease. The present sequence is human KPP protein

New human tyrosine phosphatase polypeptide, the regulation of which is useful for treating obesity, diabetes, cardiovascular or central nervous system disorder, chronic obstructive pulmonary disease and cancer.

Claim 25; Fig 2; 145pp; English.

The present invention relates to a new human tyrosine phosphatase polypeptide. The invention is useful for the preparation of a medicament for modulating the activity of human tyrosine phosphatase in a disease such as obesity, diabetes, a central nervous system (CNS) disorder,

ö chronic obstructive pulmonary disease, cardiovascular disorder or cancer. The invention is useful for treating a human tyrosine phosphatase dysfunction related disease, preferably the above mentioned diseases. The invention is useful for treating the above mentioned diseases. The trovention is useful for treating the above mentioned disorders, where the CNS disorder is selected from Parkinson's disease, multiple sclerosis, stroke, Althelmer's disease, and Huntington's disease, multiple sclerosis, adjagnostic assays for detecting from congestive heart failure and myocardial infarction. The molecules of the invention are useful in susceptibility to disease and abnormalities related to the presence of susceptibility to disease and abnormalities related to the presence of mutations in the polymucleotide coding the polypeptide of the invention. The present amino acid sequence represents the human tyrosine phosphatase protein #1 of the invention. This sequence is encoded by the human tyrosine phosphatase tyrosine phosphatase discount and processes and abnormality to the human tyrosine phosphatase tyrosine phosphatase gene located on chromosome 10 The present invention describes an isolated cancer associated phosphatase nucleic acid. Also described: (1) a method of screening for biologically active agents that modulate a cancer associated phosphatase function; (2) a method for the diagnosis of cancer; (3) a method for inhibiting the growth of a cancer cell; (4) methods of screening for targets of a cancer cancer associated phosphatase; enzyme; human; cancer; tumour; cytostatic; immunosuppressive; antidiabetic; neuroprotective; antirheumatic; antisathritic; antissoriatic; antiarterioscalerotic; antiantammatory; vulnerary; gynaecological; antiantogenic; hyperproliferative disease; autoimmune disease; diabetes mellitus; multiple sclerosis; rheumatoid arthritis; pseriasis; atherosclerosis; inflammation; scarring; 벙 New nucleic acids encoding cancer associated phosphatases, useful as targets for screening pharmaceutical agents that inhibit the growth ctumor cells, or for diagnosing and treating cancer, inflammation or ö Length 398; Indels 4.5%; Score 19; DB 5; Le 100.0%; Pred. associated phosphatase, where the targets are associated with signal transduction in cancer cells; (5) a compound (C) for the treatment of a tumour; (6) a composition a pharmaceutical carrier and (C); (7) methods for treating a tumour; and (B) a method for visualising a tumour in a patient. A cancer associated phosphatase of the present invention has cytostatic, immunosuppressive, antidabetic neuroprotective, antirheumatic, antiarthritic, antiateriosclerotic, antinheumatory, vulnerary, antipsoriatic, antiarteriosclerotic, antinhelmmatory, vulnerary, antipsoriatic antiarteriosclerotic, antinhelmmatory, vulnerary, antipsoriatic antiarteriosclerotic, antiarthritic, antiarteriosclerotic, antiarthritic, synaecological and antianquogenic activities. The cancer associated phosphatases and nucleic acids encoding the proteins are useful for visualising tumours in patients or chalon cancer. The polypeptides and nucleic acids may also be used for treating hyperproliferative diseases, such as autoimmune disease, diabetes mellitus, multiple sclerosis, rheumatoid arthritis, psoriasis, atherosclerosis, inflammation, scarring, endoametriosis or angiogenesis, determining the effectiveness of drugs, determining patient prognosis, or as targets for screening pharmaceutical agents that inhibit the growth or metastasis of tumour cells. The present sequence represents the human cancer associated phosphatase

ENERGESCSCS, which is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gorvad AE;
, Griffin JA, Marquis JP;
R, Lee S, Hawkins PR;
                                                                    The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis,
                                                                                                                                                                                                                                                                                                                    Gaps

The invention relates to an isolated polypeptide, which is a human kinase and phosphatase (KPP). KPP agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of KPP, particularly cell profiferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal heemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaemia or cancer), developmental disorders (e.g. acidosis, anaemia or mental retardation), neurological disorders (e.g. Alrahemer's disease, parkinson's disease or epilepsy), autoimmune, inflammatory disorders (e.g. Alibs, acquired immune deficiency syndrome, allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's disease, diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, gout, Grave's disease, Hashimoto's thyroiditis, irritable bowel syndrome, multiple sclerosis, osteoarthritis, steporosis, pancreatitis, Reiter's syndrome, rheumatoid arthritis, Sjogren's syndrome, uveitis), or viral, bacterial, fungal, parasitic, protozoan or helminthic infections. The KPP is useful in assessing the effects of exogenous compounds on the expression of nucleic acids and kinases and phosphatases. KPP gene is useful in gene therapy and for creating transgenic animals to model human disease. The present sequence is human KPP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, protein phosphatase; PP-4; immune system disorder; AIDS; allergy; neurological disorder; developmental disorder; Alzheimer's disease; cell proliferative disorder; Humington's disease; arteriosclerosis; renal tubular acidosis; gonadal dysgenesis; cancer; adenocarcinoma; leukaemia; transgenic animal; gene therapy.

The present sequence is human protein phosphatase (PP)-4. PP

CC polyuclectide and polypeptide are useful in the diagnosis, treatment and polyuclectide and polypeptide are useful in the diagnosis, treatment and polyuclectide immune system disorders. Examples of developmental disorders and cell proliferative disorders. Examples of immune system disorders include acquired immune deficiency syndrome (AIDS), adult treatment combined immunodeficiency disease (SCID), adult treatment of disease, atopic dermatitis, diabetes mellitus, ceptoacters, crophysema, Goodpasture's syndrome, gout, Graves disease, multiple corporosis, myosathenia gravis myosatial or pericardial inflammation, osteoarthritis, osteoporosis, pancreatitis, psoriasis, Reiter's syndrome, crhematodia trhritis, Sjogren's syndrome, sclaroderma, systemic sclarosis, trauma; neurological disorders include Alzheimer's disease, Huntington's disease, dementia, epilepsy, Parkinson's disease, mental corporation and other developmental disorders of central nervous system cuch as Down's syndrome, cerebral palsy, periodic paralysis, mental disorders including mood, anxiety, and schizophrenic disorders, seasonal caffective disorders include e.g. renal tubular acidosis, Duchenne or developmental disorders include e.g. renal tubular acidosis, Duchenne or developmental disorders include e.g. renal tubular acidosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepaticis, psoriasis and cancer including adenocarcinoma, leukaemia. The polypeptide and polymuclectide are further useful for analysing proteome of a tissue or acell type or its modulator. The polymuclectide is useful for creating knockin the mumanised animals (pigs) or transgenic celling animals (pigs) or transgenic celling animals (pigs) or transgenic celling elementation animals of or each or celling elementation animals of or each or celling animals for celling animals of central or celling animals for celling animals or cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

treation (PCR) primers, to isolated polymotrocine (11) and polypeptide (11) requences. (I) is useful as hybridiation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymotenties are also used in diagnostics as expressed sequence tags for identifying expressed control of the control of control of control of the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polymucleotide (I) and polypeptide (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 20; SEQ ID NO 36401; 103pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              biodiversity.
11-OCT-2001
   New polynuclectides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     , Wang J;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 34, Application US/08446345
Patent No. 5831009
GENERAL INFORMATION:
APPLICANT: Ullrich, Axel
APPLICANT: Moller, Niels P.H.
APPLICANT: Moller, Karin B.
TITLE OF INVENTION: NOVEL PROTEIN PHOSPHOTYROSINE
ITILE OF INVENTION: HOSPHATASES PTP-D1
NUMBER OF SEQUENCES: 41
CORRESPONDENCE ADDRESS:
ADDRESSEB: Pennie & Edmonds
STREET: New York
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COUNTRY: N.Y.

Patent No. 5912138
GENERAL INFORMATION:
APPLICANT: TORKS, Nicholas
APPLICANT: Flint, Andrew J.
TITLE OF INVENTION: SUBSTRATE TRAPPING PROTEIN
TITLE OF INVENTION: TYROSINE PHOSPHATASES
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
                                                           7683-025
NAME: Misrock, S. Leslie
REGISTRATION NUMBER: 18,872
REFERENCE/DOCKET NUMBER: 7683-
TELEPHONE: 212-790-9090
TELEPHONE: 212-790-9090
TELEPAX: 212-968-8884/9741
TELEX: 66141 PENNIE
INFORMATION FOR SEQ ID NO: 9:
SEQUENCE CHARACTERISTICS:
LENGTH: 176 amino acids
TYPE: protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5-08-036-210-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SULT 15
```

```
COPERATING SYSTEM: PC-DOS/NS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
PILING DATE: 23-MAR-1993
CLASSIFICATION UNMERS: US/08/036,210
FILING DATE: 23-MAR-1993
CLASSIFICATION: 435
ATTOREY/AGATT INFORMATION:
REPERRENCE/DOCKET NUMBER: 18,872
REPERRENCE/DOCKET NUMBER: 18,872
FELEPHONE: 212-790-9090
TELEFAN: 212-809-9190
TELEFAN: 212-909-9190
TELEFAN: 314: PENNIE
INPORMATION FOR SEQ ID NO: 22:
SEQUENCE CHARACTERISTICS:
LENGTH: 898 amino acids
TTRANDEDNESS: single
TOPOLOGY: unknown
MOLECULE TYPE: protein
US-08-036-210-22

Alternate names: LAR receptor-linked tyrosine phosphatase
Contains: protein-tyrosine-phosphatase (EC 3.1.3.48)
Species: Rattus norvegicus (Norway rat)
Date: 02-Jul-1996 #sequence_revision 02-Jul-1996 #text_change 21-Jan-2000
Accession: A6493; 153393

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Status: preliminary
Molecule type: mRNA
Residues: 1-398,799-1691 <MI2>
Experimental source: brain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           357 VHCSAGVGRTGVFI 370

NiAlternate names: leukocyte common antigen homolog
NiContains: protein-tyrosine-phosphatase (BC 3.1.3.48)
Cispecies: Rattus norvegicus (Norway rat)
Cispecies: 20-Feb-1995 #sequence revision 20-Feb-1995 #text_change 23-Jul-1999
CiAccession: S46216; S23252; Ā41032; A33154

Exp. Med. 168, 1523-1530, 1988
Title: A new member of the immunoglobulin superfamily that has a cytoplasmic region horseference number: Jul0651; MUID:89035978; PMID:2972792
                                                                                                                                                                                                                                                                                                                                                                                                                                             otein-tyrosine-phosphatase (EC 3.1.3.48), receptor type delta, splice form B precursor Alternate names: MPTP delta type B/C
Contains: protein tyrosine phosphatase, receptor type delta, splice form C
Species: Was musculus (house mouse)
Baceise: Apr-1995 #sequence_revision 19-May-1995 #text_change 12-Peb-1999
Accession: C54689; B54689

CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                       FUNCTION: The first PTPAse domain has enzymatic activity, while the second one seems to affect the substrate specificity of the
FUNCTION: It is possible that DLAR is a cell adhesion receptor. It possesses an intrinsic protein tyrosine phosphatase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         R InterPro; IPRU0021; fin3; 7.

"CDNA cloning of a novel protein tyrosine phosphatase with homology to cytoskeletal protein 4.1 and its expression in T-lineage cells.";
Biochem. Biophys. Res. Commun. 203:479-484(1994).
-i. FUNCTION: MAY BE INVOLVED IN THE REGULATION OF T CELL DEVELOPMENT.
-i. CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  non-hematopoietic origins.
-!- SIMILARITY: Contains 1 FERM domain.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tyrosine + phosphate.

CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein tyrosine + phosphate.

Lyrosine + phosphate.

SUBCELLUAR LOCATION: Type I membrane protein.

PTM: N- and O-glycosylated.

DISEASE: Defects in PTPRJ are found in cancers of colon, lung, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=22084388; PubMed=12089527;

Natl. Acad. Sci. U.S.A. 87:7000-7004 (1990).

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein tyrosine + phosphate.

-!- Tyrosine + phosphate.

-!- SUBCELLULAR LOCATION: Type I membrane protein (Probable).

-!- TISSUB SPECIFICITY: Found in a variety of tissues. It is developmentally regulated in the brain (By simlarity).

-!- SIMILARITY: Contains I eukaryotic-type carbonic anhydrase domain.

-!- SIMILARITY: Contains 1 protein-tyrosine phosphatase domains.

-!- SIMILARITY: Contains 1 fibronectin type III domain.

                         tyrosine + phosphate.
SUBCELULLAR LOCATION: Type I membrane protein.
DEVELOPMENTAL STAGE: Detectable in the epiblast of oocytes and throughout early mouse embryo development. In adult, expression is localized in gonadal germ cells.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
SIMILARITY: Contains 10 fibronectin type III domains.
CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (POTENTIAL)

Note=No experimental confirmation available;
Note=No experimental confirmation available;
TISSUE SPECIFICITY: Bone and testis. In the latter, restricted to
the basal portion of the seminiferous tubule.
DEVELOPMENTAL STACE: Up-regulated in differentiating cultures of
primary osteoblasts and down-regulated in late stage mineralizing
cultures. In testis, expression is highest between stages i and
VII when maturing spermatids remain buried within the sertoli
                                                                                                                                                                                                         01-NOV-1997 (Rel. 35, Created)

Comment=A presumed alternate transcript of 4.8-5.0 kilobases,
which may lack PTP domains, is present in proliferating
osteoblasts, but not detectable at other stages;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  INDUCTION: By parathyroid hormone and cAMP analogs. PTM: The cytoplasmic domain contains potential phosphorylation
                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE-95074080; PubMed=7527035;
